HIBITED BY LAW. REPRODUCTION OF THIS FORM IS PROHIBITED.

50X1-HUM

1. The Stachanov shaft was located approximately 600 meters southeast of the church in Radvanice and approximately 100 meters south of the Radvanice - Jivka road. The ore deposits had a length of approximately 2.5 km and spread to the west and northwest. The uranium ore, which was of black color, was deposited partly in coal and partly in a mixture of slate and coal.

2. The ore was sorted aboveground in a RASS installation. Since approximately January 1957, quantities mined had decreased to such a degree that the Stachanov uranium mine was to be changed into a coal mine by 1 April 1957 and that uranium ore was to be mined only as a by-product. Preparations for coal mining were started in February 1957.

3.  sketch map showing the location of the Stachanov uranium mine near Radvanice.
